

Culture and Resilience of Farmers in Your Community

What Health and Other Professionals Need to Know to Support the Farming Population

A three part Webinar Series
June 22, June 29, July 6
10:00 am - 11:30 am

The Delaware and Maryland Eastern Shore coastal communities' farm enterprises are diverse and rich with tradition. They also face challenges to their health and well-being requiring support from health and other professionals. Yet, these professionals may not be confident in their ability to prevent or reduce impacts of stressors and increase resilience of the farming population.

This three-part webinar series is designed to increase your familiarity with the unique characteristics, nature, and culture of farmers, farming, and their communities. The series will build your confidence in applying what you've learned to your resource building, outreach, and network development to better serve the farming population.

Cost: Free! Grant-funded

Completion: Provided to those completing the program surveys
