

Landscape and Nursery IPM Report

Stanton Gill, IPM & Entomology Specialist for Nurseries & Greenhouse, CMREC, University of Maryland

Extension IPM team:

Karen Rane, Director of Plant Diagnostic Clinic, University of Maryland Extension

Paula Shrewsbury, Entomology Specialist, University of Maryland Extension

David Clement, Plant Pathology Specialist, University of Maryland Extension

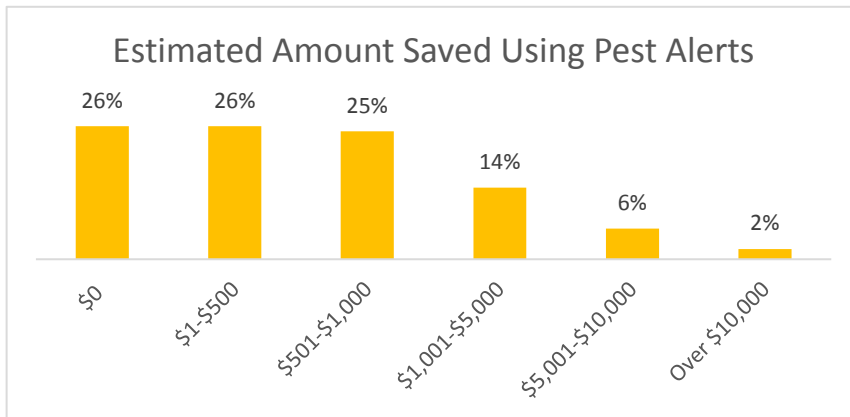

Charles Schuster, Extension Educator, University of Maryland Extension

Ginny Rosenkranz, Extension Educator, university of Maryland Extension

Suzanne Klick, Technician, CMREC, University of Maryland Extension

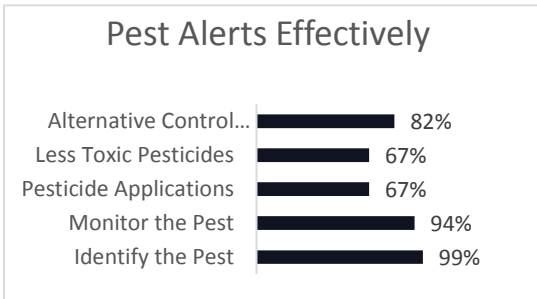

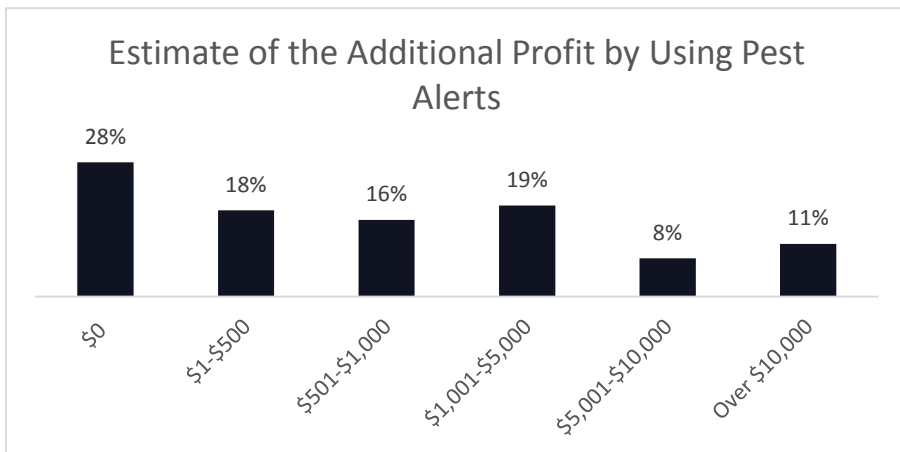

The overall goals are to use a transdisciplinary approach to inform stakeholders by providing research based and timely educational materials and training on the diagnostics and IPM management of native and invasive pests, and to help stakeholders move forward on the adoption of ecologically sustainable, pollinator-friendly pest management practices. We propose to:

- 1) survey stakeholders on pesticide use and pest management practices
- 2) implement demonstration projects in collaboration with stakeholders on the conservation of pollinators and natural enemies, and use of low risk pesticides
- 3) expand ongoing IPM efforts through the development of innovative educational materials and training activities
- 4) continue to expand our outreach on the current UME Green Industries IPMnet web site.

73% of Respondents saved money using pest alerts.

72% of Respondents added additional profit using pest alerts.
