The following steps will help you to update soils data files. The soils have already been saved on each county’s shared drive at NRCS\RUSLE2\MD_Soil_Data_1-15

Open RUSLE2 program, click on Database, and Import RUSLE2 database. Navigate to the “S” drive (S:SERVICE_CENTER\NRCS\RUSLE2\MD_SOIL_DATA_1-15), choose the county soils and click open.

The database menu box will appear. Click on the soils folder and the county folder that you are going to import. Make sure None is selected under “Include dependent files” and Import to same folder is selected. Click Import.
When the “Warning” box appears click OK

Let the import process run its course. This may take a few seconds. Do not click the mouse or click cancel.
When the **Import Complete** Box appears, click **OK**.

Click “OK” to acknowledge the import is complete and to close the import process.

You are now finished and can resume using RUSLE2 with your updated soils data.
