SDILL@UMD.EDU

Objectives

- Grower Goals
- Budgeting
- Financial Analysis
- Sample Model

What are grower's goals?

- Alternative crop which can work well as a small farm enterprise
- Inherited or purchased a farm, wants to derive income from land.
- Interest in wine. Grape growing is a horticultural expression of that interest
- There are intensive labor and capital demands

What are enterprise budgets?

Enterprise budgets –

- An organized listing of your estimated gross income and costs which can be used to determine the expected net income for a particular enterprise
- Budget on a per unit basis
 - – ex 1 acre, 1 bushel, 1 ton
- Sections include
 - Income, Costs, Profit

What are Enterprise Budgets?

- Traditional Crops
 - Very detailed, more accurate due to standardization of production and historical cost/income data
- Livestock
 - Dairy
 - Beef
- Forages
- Specialty crops
 - Less detailed, less accurate
 - Very dependent on individual cost/income projections

Who can use these budgets?

- Agricultural producers
- Extension specialists
- Financial institutions
- Governmental agencies
- Advisors of food & fiber

Budgets are Used for

- Itemize the receipts (income) received for an enterprise
- List the inputs and production practices required by an enterprise
- Evaluate the efficiency of farm enterprises
- Estimate benefits and costs for major changes in production practices
- Determine the feasibility of adding a particular enterprise

Budgets are Used for

- Provide the basis for a total farm plan
- Support applications for credit
- Inform non-farmers of the costs incurred in producing crops
- Not an exact science – drought, disease etc

6 Parts of a Budget

- Investment/Capital
- Gross Income
- Variable Costs
- Fixed Costs
- Net Income

Costs

- Variable costs - These are expenses that vary with output within a production period
 - Fuel, Fertilizer/Lime, Disease/Insect control, hourly seasonal labor
- Fixed Costs- Fixed costs are expenses that do not vary with the level of output.
 - Depreciation, Interest, Repairs, Building costs, Machinery Costs, Taxes, Insurance, salaried or full time labor

Net Income

- Income over variable costs
 - $\text{Income} - \text{Variable Costs} =$
- Income over variable and fixed costs
 - $\text{Income} - (\text{Variable} + \text{Fixed Costs}) =$
- Decision making time....
 - Can it cash flow
 - Can I cover at least the variable costs
 - Economies of scale
 - Loans and payback ability

Assumptions used in financial analysis

- Land is owned; purchase price not included in budgets
 - Have a \$63 land charge
- Models based on 1 acre + *Vitis vinifera* vineyard
- Excellent site, no crop reduction
- Labor at \$8.00 (unskilled) or \$18.00 (skilled)

Assumptions used in financial analysis

- Operating expenses borrowed at 9% interest for 6 months of expenses.
- Excellent vineyard management, including consultant
- Irrigation is included, Deer fence is not
- Fixed costs are calculated from custom rate charges
 - You should use your actual fixed costs

Assumptions used in financial analysis

Grapes valued at \$600 to \$2,000/ton

	Tons	Price/Ton
Red	3-5 Tons	\$1,600-2,000
White	3-5 Tons	\$1,200-1,600
Hybrid	4-7 Tons	\$600-1,200

Model values used in financial analysis

Vineyard acreage	1
Training system	VSP
Row / vine spacing (feet)	10 x 6
Variety	White
Tons/acre at full crop	4.0
Value of crop (\$/ton)	\$1,450
Skilled labor (\$/hr)	\$18.00
“Unskilled” labor	\$8.00
Picking labor (\$/lug)	\$1.25

Generalized Equipment Inventory

55-hp, 4-wd tractor w/ spray cab	\$30,000
4-wd pick-up truck	\$20,000
50-gal herbicide sprayer	\$2,700
300-gal airblast sprayer	\$12,500
5-ft rotary mower	\$1,600
Fertilizer spreader/broadcaster	\$1,500
Post driver*	\$2,000
Auger	\$1,200
Trailer (harvest, etc.)*	\$2,000
	\$73,500

Budgets include worksheets on:

- List of production inputs
- Establishment
- Year 1-5
- Summary Table

These are estimates based on information provided to the University of Maryland Extension. Your costs will be different and should be calculated using this as a reference and/or template.

WINE GRAPE ESTABLISHMENT		PER ACRE FOR		2015

Recommendations

- A vineyard is a labor- and capital-intensive enterprise.
 - Be sure to record the amount of time spent in the vineyard and take caution in major capital purchases.
- It takes considerable time (7 to 12 years) for a vineyard to become profitable, perhaps never if scale of operation is too small relative to capital investment.
- Row spacing and vine training, which affect yield, will have a major impact on vineyard profitability.

Recommendations

- Continue research and attend trainings on vineyard production and management
- Do your own budgets
 - estimated budget and an actual budget using
- Write and implement a farm business plan to set goals, manage finances and develop marketing
 - Workbook
 - www.extension.umd.edu/mredc

“Ideal” vineyard

- Manage capital assets (purchase used equipment, avoid buying unnecessary equipment, etc.), land expenses
- Use your own equity rather than paying interest
- Excellent site to avoid catastrophic crop loss
- High value crop with “high” yields of high quality fruit (close rows and divided canopy training)
- Acreage of 15 to 30 acres to make most efficient use of capital purchases, such as a sprayer or tractor

Conclusion

- Research Training Systems – including yield, labor requirement and establishment
- Research available markets
- Crunch the numbers and talk with your family, friends and lender
- Make decisions on profits, responsibilities and your farm business
- Enjoy your new Vineyard
