

A basic soil test that gives readings for soil acidity (pH), calcium (Ca), phosphorus (P), potassium (K), and magnesium (Mg) levels is sufficient for most home gardeners.

- Additional tests, including lead (Pb), recommended for food gardens, are offered by most labs for an additional fee.
- University of Delaware includes lead in its basic “Home Lawn and Garden Soil Test.”
- Most labs offer homeowner and commercial soil testing. Select the appropriate category.
- Reports include recommendations for specified crop (e.g. lawn, vegetable garden, etc.).
- Test results usually available online for fast, efficient reporting.
