

# Equine Pasture Management Tips for **AUGUST**

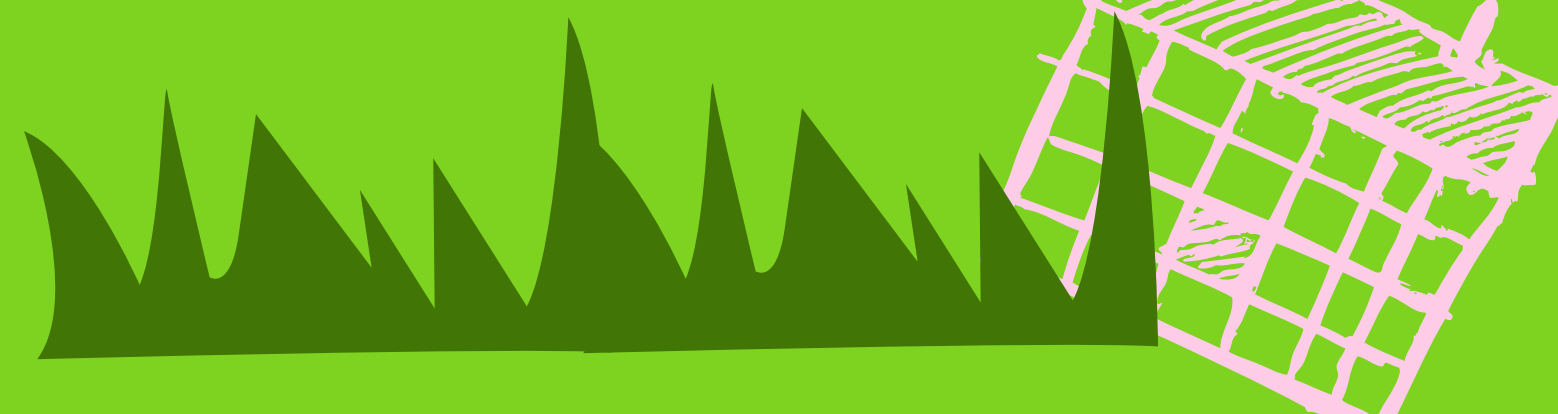

## 1. Plant Certified Seed

Plant certified pasture seed optimal for grazing horses and soil conditions of grazing pastures between August 10 and September 10. Early planting is critical to provide adequate fall growth and ensure strong grass pasture in the spring.

**Do not graze reseeded pasture for a minimum of 6 months.**

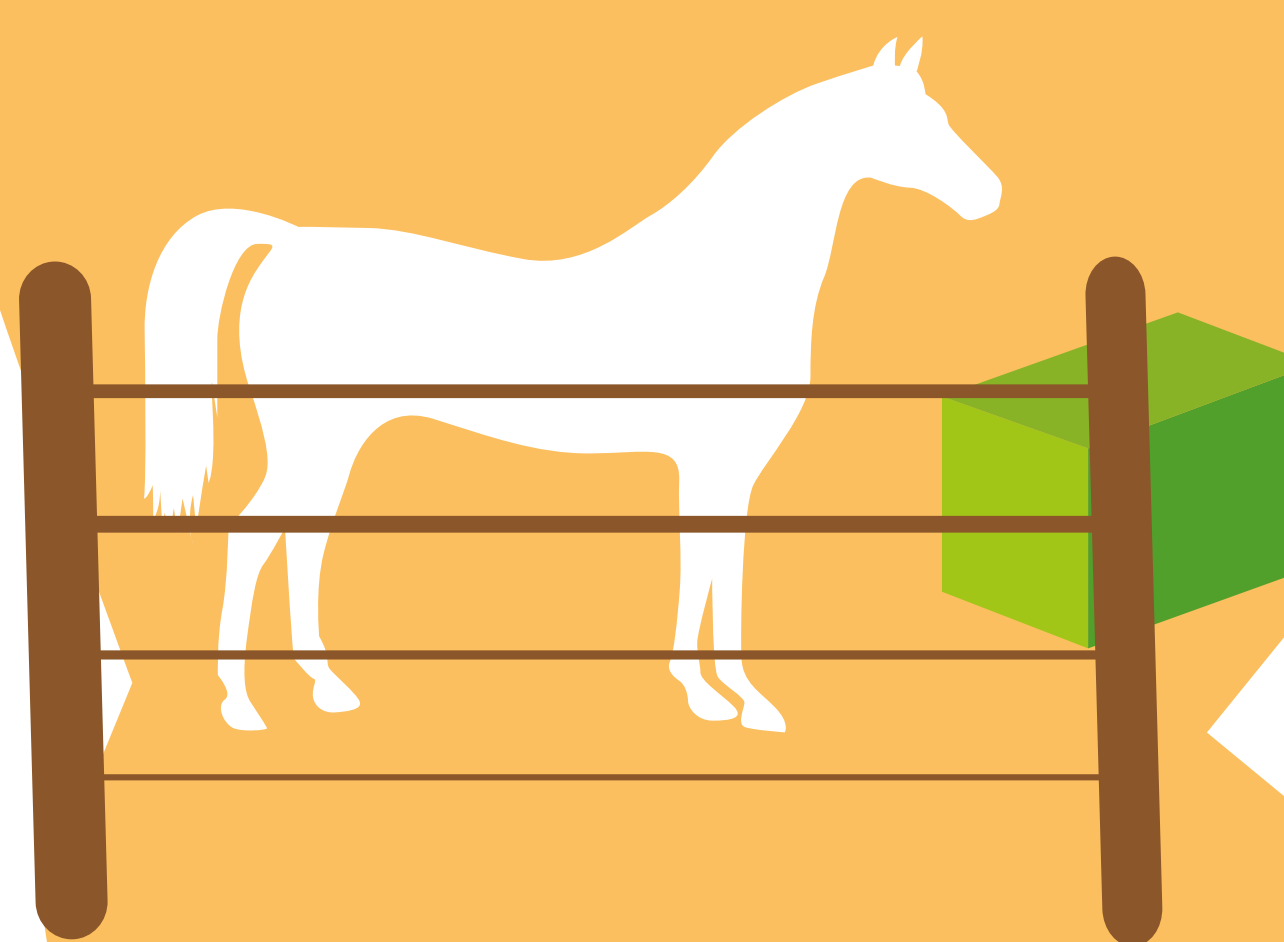

## 2. Rest Winter Grazing Areas

Begin resting tall fescue pastures to stockpile for winter grazing.

## 3. Manage in Drought

Close off pastures and feed hay to horses housed in loafing lots if drought conditions and slow grass growth exist.

## 4. Fix Eroded Areas

Start your soil erosion correction plans to make sure all projects are completed before the fall rainy season.
