

Equine Pasture Management Tips for February

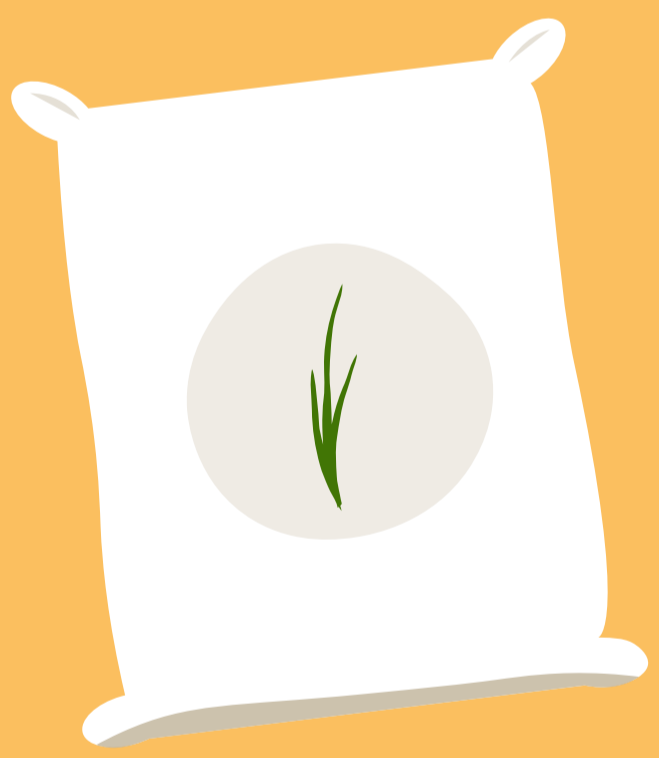

1. Protect Your Pastures

Continue to feed horses hay in loafing lot/heavy use areas if pastures are soft and wet.

2. Frost Seed as Needed

Broadcast seed in bare spots in pastures as needed to maintain vegetative cover during the grazing season.

3. Update Nutrient Management Plans

Update Nutrient Management Plan if required by law, including preparing and sending in the Annual Implementation Report.

4. Check Your Fences

Check fences and fencing supplies now, make any repairs before the grazing season begins.
