

Equine Pasture Management Tips for November

1. Check Out Cost-share

Discuss grazing and conservation cost-share programs with county soil conservation district staff to see if financial assistance is available.

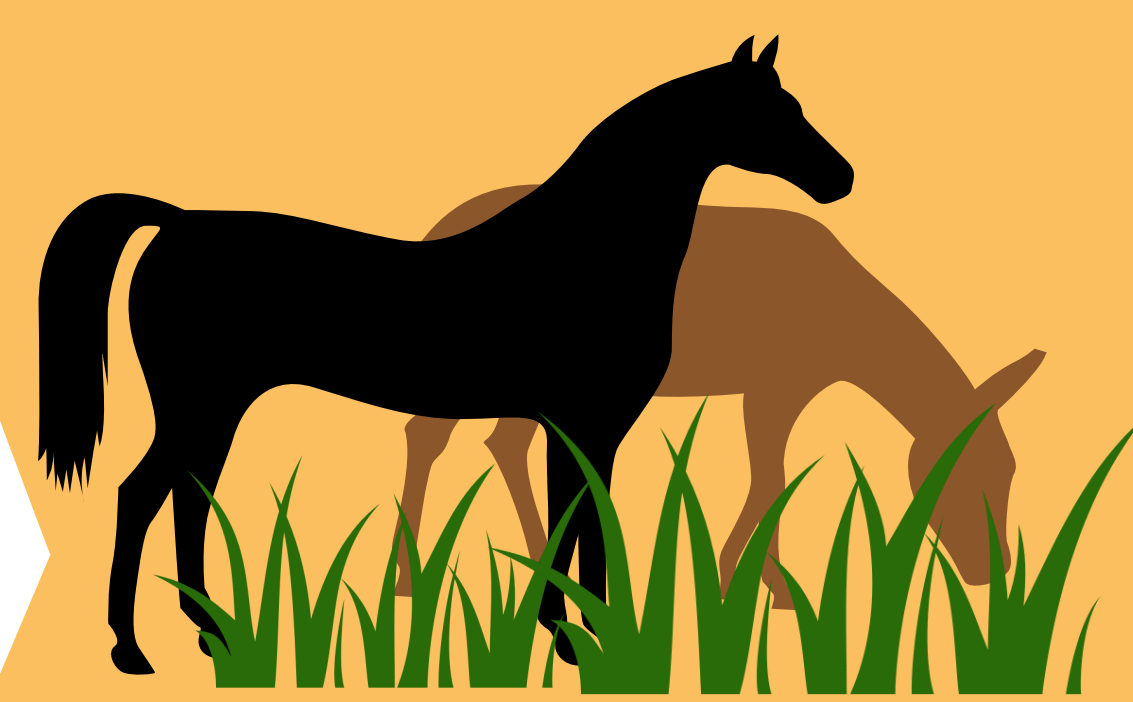

2. Order Seed

Pre-order certified seed to take advantage of dealer discounts, seed availability, and a February delivery if spring spot seeding of pastures is needed.

3. Graze Stockpiled Fields

Begin turning horses out on pasture set aside for winter grazing (i.e. stockpiled) once other fields have been utilized.

4. Prepare for Frost Seeding

For pastures that will be frost seeded in early spring, allow horses to closely graze plants down to 4 inches to remove excess residues. This will allow for better seed to soil contact and establishment.
