A MASTER GARDENER PROGRAM

COMPOSTING

A MASTER GARDENER PROGRAM

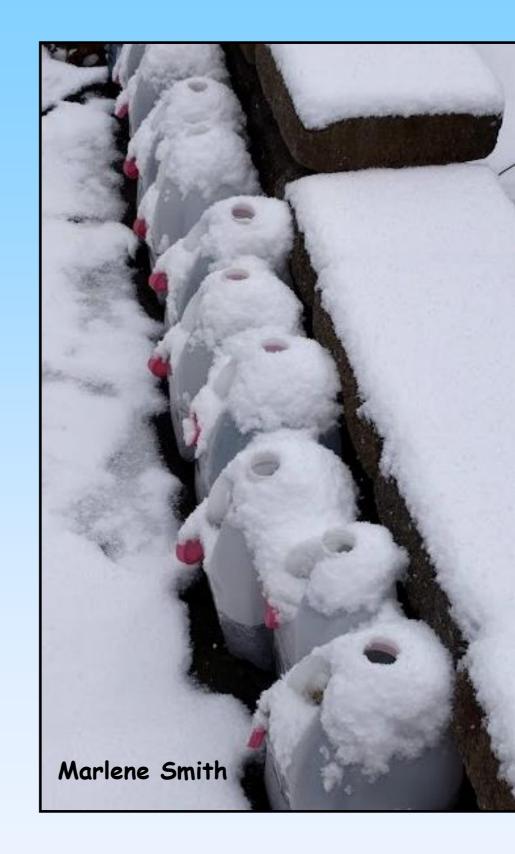

What is Winter Sowing?

- An incredibly easy way to grow seedlings
- In the middle of winter, scoop planting medium into a plastic container with a hole in the top for ventilation & holes in the bottom for drainage
- Plant seeds and wait for them to sprout
- Winter sowing introduced by Trudi Davidoff in 2000 & has since been recognized officially by the USDA

Why Winter Sow?

- Inexpensive!
- Environmentally friendly
- Easy
- Fun!
- No hard and fast rules

Horticultural advantages

Marlene Smith

- Protects seeds
- Eliminates competition from weeds
- Produces strong, healthy plants
- Eliminates need for "hardening off"
- Reduces need for watering
- Provides cold moist stratification

Natives to Winter Sow

Partridge Pea Chamaecrista fasciculata

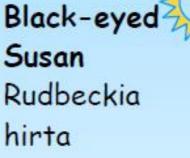

Wild Bergamot Monarda fistulosa

Common Milkweed Asclepias syriaca

Spotted Beebalm Monarda punctata

Swamp Milkweed Asclepias incarnata

Foxglove Beardtongue Penstemon digitalis

Yellow Sneezeweed Helenium autumnal

Joe Pye Eutrochium maculatum

Need 30 days cold, moist, stratification

Photos by prairiemoon.com

Needs light to germinate

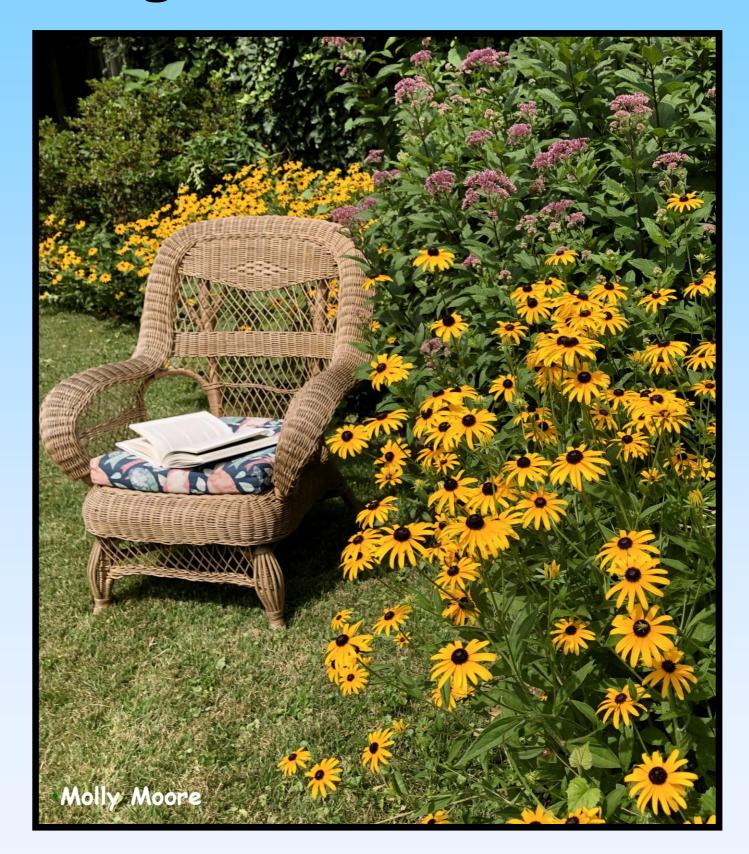

Why natives?

- Better suited for our climate
- Require less water once established
- Do not need fertilizer or pesticides
- Tolerate a variety of soil
 & light conditions

More reasons to grow natives

- Add year-round beauty & interest to the garden
- Healthier for you & environment
- Provide essential food & shelter for local birds, pollinators and other wildlife

How many insects does it take this Carolina Chickadee to raise one family?

7,500-9,000!

What to Sow When December 21-March 20

- All native plants—but especially ones that require cold moist stratification
- Native grasses, vines, shrubs, trees
- Most perennials, biennials, annuals, herbs & veggies

What to Sow When February-March Cool weather vegetables

- •Lettuce
- ·Bok choy
- •Broccoli
- Carrots
- Snow peas
- Spinach
- •Swiss chard
- •Kale
- Radish
- Onion

Late February-March Time to sow herbs

- Parsley
- Dill
- Cilantro
- Lavender
- Rosemary
- Sage
- Thyme
- Basil

Photos by Molly Moore

More Late February-March Tender annuals

- Zinnia
- Marigolds
- Nasturtiums
- Tithonia
- Cosmos
- Calendula

What about heat-lovers? Mid-March to April

- Tomatoes
- Peppers
- Eggplant
- Okra
- Squash
- Pumpkins
- Watermelon
- Cucumbers/cucurbits

Tools of the trade: What you need

- Containers
- Soilless potting mix or seed starting mix
- Bucket for mixing
- Water
- Trowel
- Scissors or sharp knife
- Wood-burning pen, drill, etc
- Tape for sealing/labelling
- Marker for labelling
- Seeds

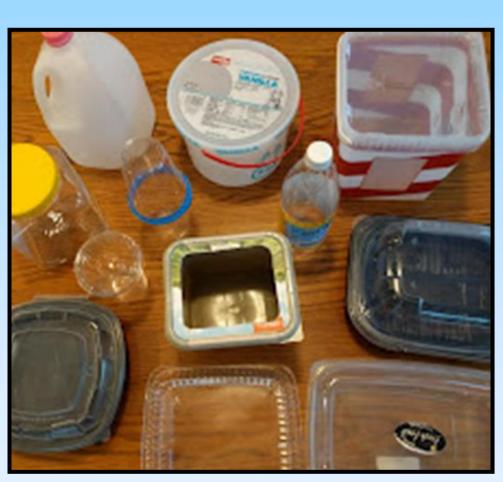

Collect and wash containers

- Milk jugs (gallon or quart), 2-liter bottles, plastic food tubs, ice cream tubes, baggies, aluminum pans, deli/take out containers, plastic drink cups
- Wash and rinse containers to remove any milk or food residue. Allow to dry completely.
- Need minimum of 3-4 inches of potting mix for natives to allow root development.

A word about containers: Use your imagination!

Photos by Marlene Smith

Video by Molly Moore

Making the Cuts

- Using knife, scissors, drill, hot glue gun, or soldering iron, make 4-6 holes in bottom of container
- •For jugs, cut in half, leaving a 4" bottom and a hinge under the handle. Discard cap!

Video by Wm Smith, St. Mary's MG

Prepare labels

- Use UV-resistant markers, pens, paints on outside
- As a backup in case labelling on the outside fades, use apopsicle stick or plant marker inside jug
- Label the bottom with duct tape and waterproof marker

Video by Wm Smith, St. Mary's MG

Prepare potting mix

- Use large container such as a wheelbarrow, cement mixing tray or bucket
- Add water to potting mix until thoroughly wet but not sopping wet

Video by Wm Smith St. Mary's MG

Add potting mix

- Optional: Add a waterpermeable barrier (coffee filter, landscape fabric, or newspaper) to the bottom before adding potting mix to keep slugs out & keep soil in
- Add approx 3-4 inches of mix to the container
- Tap container to settle the mix, remove air pockets

Video by Wm Smith, St. Mary's MG

Plant the seeds

- Plant only one type of seed at a time
- Mix tiny seeds with course sand or vermiculite and sprinkle on top of mixture
- Larger seeds—follow instructions on packet for depth

Video by Wm Smith, St. Mary's MG

Methods of Sowing Seeds

Space seeds so they can be easily cut or torn apart

Hunk o' seeds—sprinkle in a mass that can be cut brownie-style

Photos by Marlene Smith

Seal the containers

Video by Wm Smith, St. Mary's MG

Care of jugs & containers

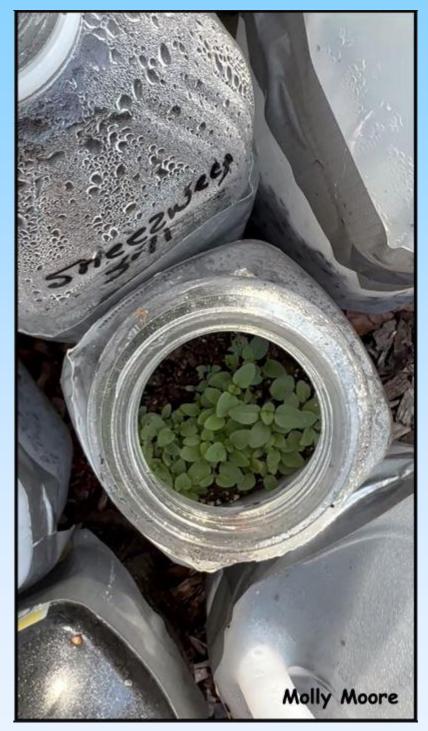

- Do not put caps on jugs
- Place in protected area safe from pets, wild animals, young children and clumsy spouses
- Place in part shade/part sun

The Wait

- •Have patience
- Seeds will sprout when nature tells them to
- •You can't hurry the seeds
- But you can—and should—peek

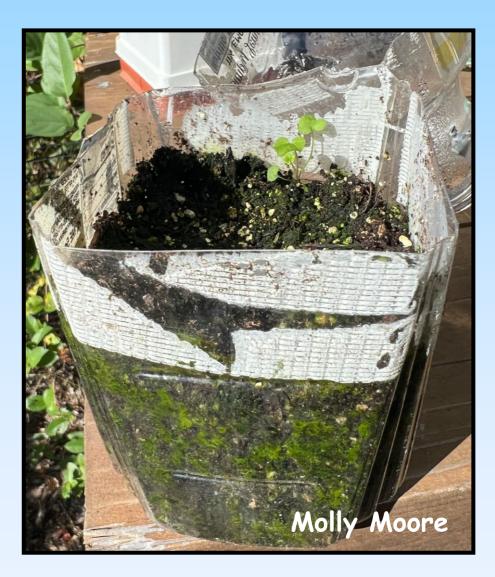

Video by Molly Moore

Monitor your babies

Condensation—good

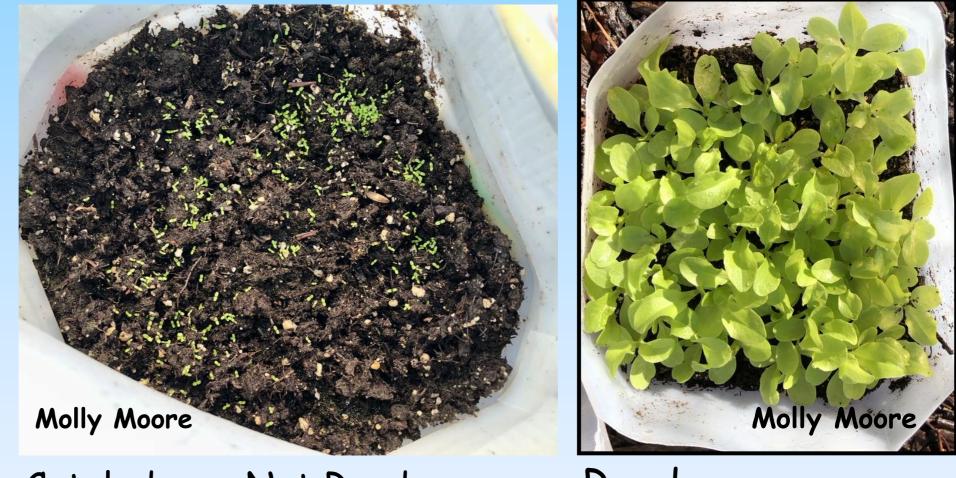

Green algae—bad

My seeds have germinated. Now what?

- Wait for at least
 1-2 sets of true
 leaves to appear
- Or until seedlings are 2 inches tall

Cotyledons—Not Ready

Ready

Transplanting seedlings

- Transplant after seeds sprout at least two true leaves or seedlings are 2 inches tall
- Open containers to acclimate
 2-3 days before transplanting.

Sometimes there's a surprise inside!

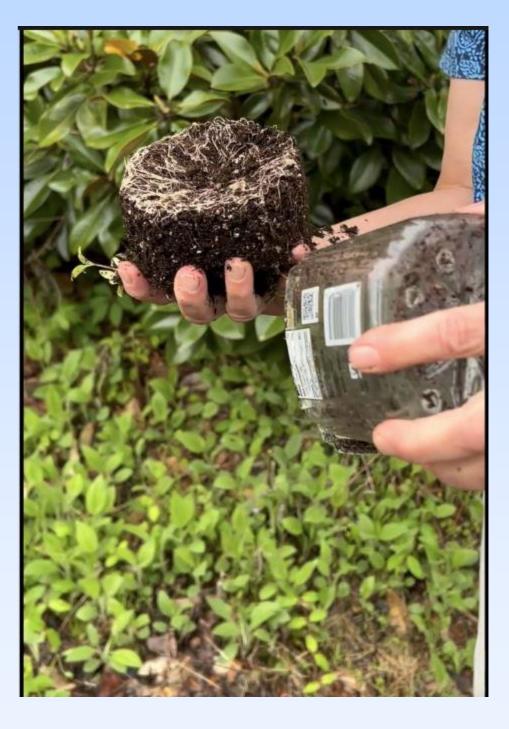

Winter sowing's secret to success

<image>

Strong roots!

How to get the plants out!

Video by Molly Moore

Pull individual plants apart...

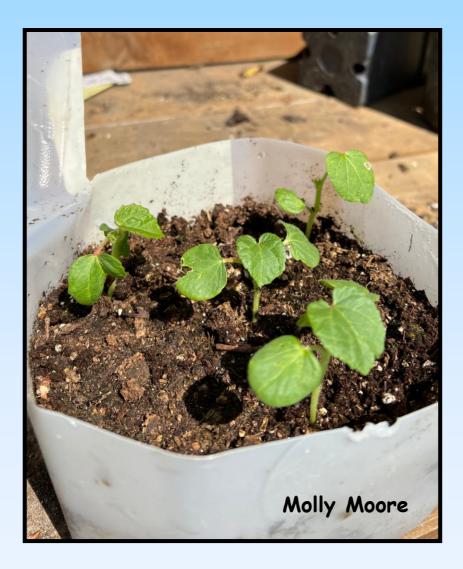

Gently!

Video by Molly Moore

Methods of Transplanting

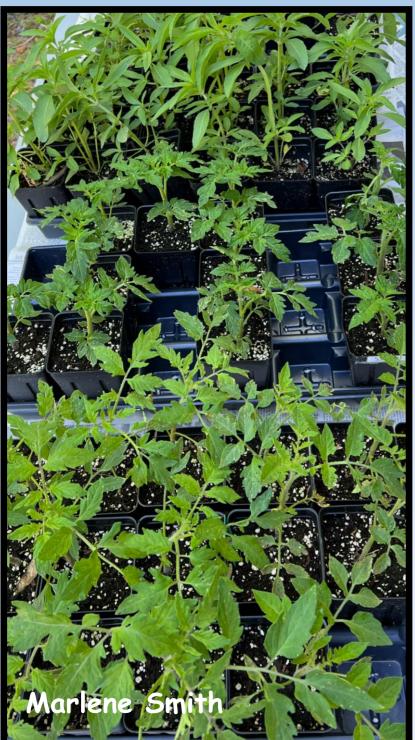

Seeds spaced for easy individual separation

Seeds planted in a mass can be cut brownie-style

Our Winter Sowing Experiences & Outcomes

One year in a winter sown bird & pollinator garden

Aug. 8, 2021

August 8, 2022

Photos by Molly Moore

Companions in the garden

- Basil with tomatoes, improves flavor & growth
- Marigold, zinnias, nasturtiums planted among all veggies to deter pests & attract pollinators
- Oregano with cucumber & melons deters pests in general
- Rosemary with kale deters cabbage moths, with beans deters bean beetles

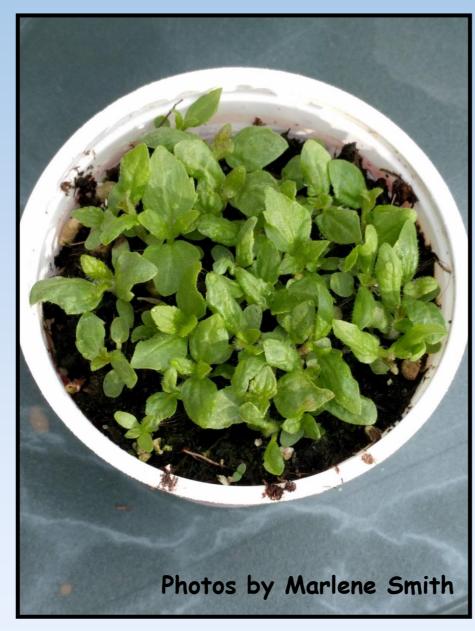

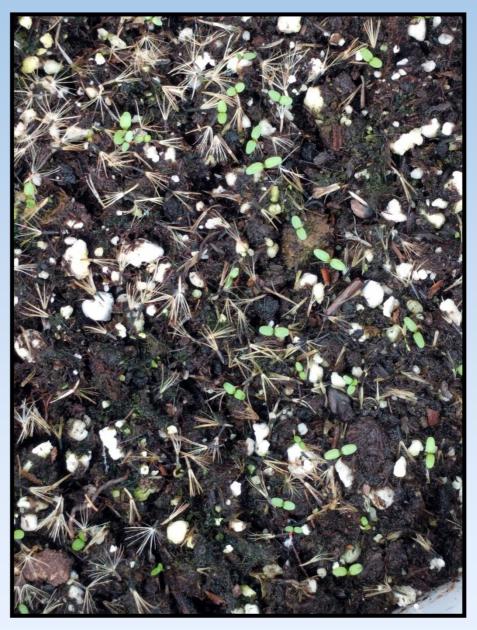

Photos by Molly Moore

Placement of containers matters!

Two containers of Joe Pye planted January 14, 2022 Check out the difference in the photos taken March 20

Germinated within 1 month; photo taken 2 months after sowing

Germination took 2 months; photo taken 2 months after sowing

Where's the beef? Or should I say Big Beef Tomato?

3/3/2021 Winter sowed Big Beef seeds

3/20/2021 Seeds germinated

4/1/2021 Opened & caught distinctive whiff of tomato foliage

4/12/2021 Seedlings transplanted into garden

7/15/2021 Plants are taller than my 6'3" husband and their supports

7/20/2021 First tomato harvested with a good "blush"; weight 11.8 oz

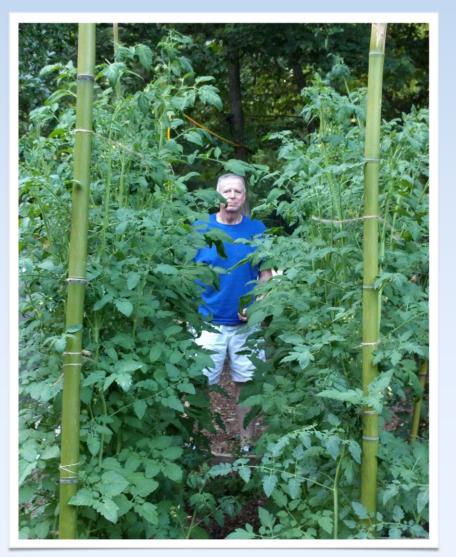

7/23/2021 Tomato fully ripened inside on the kitchen counter. Sliced and enjoyed on a BLT

40 Photos by Marlene Smith

Winter Sown Super Snappy Peas

- 2/2/22 Winter sown in a gallon milk jug
- 2/11/22 Germinated in 9 days
- 3/2/22 Planted in the ground after
 2 sets of true leaves appeared.

Look at the roots on these babies!

Winter Sowing in Jugs

1. Collect & wash jugs. **Discard** cap

> 2. Punch 4-6 drainage holes in bottom

3. Cut jug in half leaving a hinge

Mist Flower

MASTER 💏

4. Label with weather resistant marker

UNIVERSITY OF

EXTENSION

MARYLAN

6. Scatter seeds on top of soil. Cover lightly with soil. **Mist lightly**

5. Put 3-4" of

moist soil in

bottom of jug

7. Duct tape jug together

See our videos

on winter

sowing

8. Set jugs outside where rain/snow can enter top. Water if needed

9. Open jug in spring after seeds sprout & danger of frost ends

> **10. Transplant** when seedlings are at least 2" tall
